The 2 stage cooling is not an issue. Wire your Y to Y1 and do not connect anything to Y2. Last fall I installed a honeywell humidifier and a prestige TS.

Winter and heating went fine. Now, I have turned on the ac. Regardless of what temp I set, the air conditioning will not turn off. i.e I have set the desired temp to 72 degrees. The temp reaches 72, but AC keeps running. The interesting thing is that the indoor temp does not go below 72 and the ac keeps running. I know this can be because of variety of reasons, including vent dust. Im getting it cleaned in a weeks time. Meanwhile, can someone let me know if I got the wiring right.We welcome your comments andAll rights reserved. You may freely linkView our Privacy Policy here. Quick Reference Chart. Value Series.
